kBox4 Active systems offer the essentials of flywheel training for all levels of users. One of the newest members of the kBox4 family, this is the robust entry-level device in our product line, ideal for gym studios, group classes, amateur athletes, and more. The kBox4 Active Platform is assembled by Swedish expert technicians with a light bronze coloured steel chassis requiring minimal floor space. The small Pulley Block mounted on this model is beneficial due to its minimal dimensions and reduced chance of interference during training. Its inertia capacity goes up to 0.100 kgm².

ABOUT THE KBOX

Train Up To Your Potential

With the kBox and kPulley, instead of a fixed load determined by gravity when lifting weights, you work against the variable inertia of heavy steel flywheels determined by the effort and energy you unleash into the device.

Engage Every Muscle

These training devices are truly versatile and serve multiple purposes, allowing you to engage your upper body, core and lower body with a wide variety of exercises.

Keep The Gym Nearby

It is completely portable and easy for anybody to carry or stove away.

Get Real-Time Feedback

Its kMeter app-based wireless feedback system can be used to measure and save actual power output and more.
